Model calibration only: original versus calibrated two-state MPC
Fresh Gazebo worlds; same weights, horizon and input constraints
EKF height (m)
Original: a = u
Calibrated: a = K·u + b
Original: a = u (repeat)
Calibrated: a = K·u + b (repeat)
Height reference
Upward velocity (m/s)
Soft speed limit
Acceleration command (m/s²)
Normalized thrust
Simulation time from first MPC 4 m decision (s)
