Calibrating the two-state altitude model (no added dynamic state)
Training: original MPC flight
EKF acceleration
Nominal prediction: a = u
Calibrated: a = 1.549u +0.041
Upward acceleration (m/s²)
Time from height reference step (s)
Holdout: separate P/PI flight, within calibration range
EKF acceleration
Nominal prediction: a = u
Calibrated: a = 1.549u +0.041
Upward acceleration (m/s²)
Time from height reference step (s)
